

MATCHKAMI CHATBOT

Introduction to TITANS – connecting underprivileged and refugee schools with NGOs and donors, bridging urgent needs with those ready to make an impact.

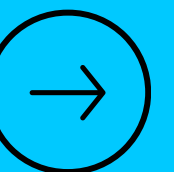

Problem Statement

Rural Malaysian and refugee schools can't broadcast verified supply needs as they don't know where, how and who to reach out to.

Solution Overview

We can tell the chatbot what we need—like textbooks or donation—and it will provide information to us about NGOs, donors, or sponsors who are ready to help.

Problem: • School struggle to access the specific resource they need • Finding schools to support takes times, involve people work and cold outreach. Existing Alternative: • Manual matching via social media/ WhatsApp/email • Donation marketplace • Corporate CSR portal	Solution: Creating a chatbot that connect school in need to NGOs or donors. Key Metrics: #of user using chatbot %successful need-to-donor match	Unique Value Proposition : • Targeted matching • Efficiency • Easy to use for all High Level Concept: A smart platform that bridges the gap between under-resourced schools and donors through AI-powered matchmaking.	Unfair Advantage: • Exclusive data and learning algorithm • Verified network of NGOs Channels: • Email (less invasive)	Customer Segment: • Schools • NGOs • CSR Early Adopters: • School in urgent need of resources • Small to medium NGOs that focus on education • Corporate social responsibility teams of companies • Individual donors focus on education sources
Cost Structure:			Stream Revenue:

Future Scalability

- Build a web portal for **richer interaction**.
- Introduce **trust-building features** like ratings or profiles.
- **Monetize** lightly if a **sustainable** model is needed for platform upkeep.

Thank You

Bridging needs and deeds.
